## As Kafka Grows, So Does Its Complexity

It's essential to choose the right framework for scaling your data streaming operations.

**\$4.4 Million\*** Average cost of a data breach in 2023

↳ Protect your business from costly data breaches.

**20** Hours of productivity lost every week

↳ Increase productivity by an average of 96% with Conduktor\*\*

**1 Month** Time taken to onboard teams to Kafka

↳ Conduktor enables you to onboard teams to Kafka in days, not weeks.

## Key Benefits

### Give teams ownership with self-service controls

Enable teams to take ownership of their data and projects through a federated control framework, and discover public data in a data catalogue. This removes operational bottlenecks, increases discoverability and accelerates value delivery. Permission delegation and centralized policies ensure security and compliance, while enforcing best practices.

### Enforce data quality at scale

Only high-quality data should make it into your system. With strict schema adherence and quality controls, you'll stop bad data at the source. Data owners can enforce standards across any technology or language, guaranteeing data integrity, preventing application issues, and keeping your ecosystem running smoothly.

### Ensure regulatory compliance

Centrally enforce encryption, data masking, and access controls to safeguard sensitive information across your business. Gain full accountability and compliance by tracking every authentication, data access, and action. Our unified security model ensures consistent protection, simplifies third-party sharing, and maintains compliance as your data streaming grows.

### Simplify Kafka Management

Effortlessly develop and manage Kafka applications with our intuitive, user-friendly interface. Onboard developers in days, not weeks. Quickly search, filter, and sort data, while seamlessly managing topics, consumer groups, subjects and connectors across multiple clusters—all from a single platform. Make Kafka accessible and efficient for your entire team.

# Connect all of your data in a single platform

Conduktor offers flexible, secure deployment options with deep integration to your data service provider, allowing you to manage your entire Kafka infrastructure from a single platform.

## Flexible, Modular Pricing

Start For Free and Pay As You Grow

### Conduktor for Teams

For teams working with Kafka

- ✓ Self-Service Applications and Policies
- ✓ Audit Log and Custom Alerts
- ✓ Data Masking for UI
- ✓ RBAC
- ✓ SSO

*Priced Per 50 Users*

### Conduktor for Enterprise

For businesses streaming data at scale

EVERYTHING IN TEAMS PLUS:

- ✓ Data Quality Controls
- ✓ Traffic Control Policies
- ✓ Chaos Testing
- ✓ Large Message Handling
- ✓ Virtual Clusters & Topics
- ✓ Server Side Filtering

*Priced Per 50 Users*

### ENHANCE CONDUKTOR ENTERPRISE WITH POWERFUL ADD-ONS

#### Advanced Security

Ensure regulatory compliance and safe data sharing

- ✓ End-to-End Encryption
- ✓ Application Audit Log
- ✓ Data Masking for 3P Data Sharing

#### Failover

Secure your critical services with failover

- ✓ Cluster Switching
- ✓ Disaster Recovery

Available in  
AWS Marketplace
