

# The Data Hub for Operational Data and AI

Accelerate the utilization of your operational data—securely, in real-time and at scale.

## What is Conduktor's Data Hub?

The shift is clear: batch analytics, centralized lakes, and reactive governance no longer cut it. AI now demands real-time, governed, and actionable operational data. Delivering on Generative and Agentic AI requires more than infrastructure—it requires a live data foundation built for execution.

**Conduktor is the Data Hub built for this reality.** We unify fragmented systems, embed governance and security in-stream, and activate operational data for AI—without replication or delay.

## Make Operational Data Ready to Act

Your Business Runs on Operational Data

Of all data, operational data matters most. It's live, contextual, and constantly in motion—customer actions, payments, logistics, fraud signals.

Delay it, and you lose revenue, trust, and control.

### Unify Data, Eliminate Blind Spots

Scattered data leads to missed signals, duplicated work, and bad decisions.

Conduktor unifies your operational data—Kafka and beyond—for full visibility and control.

**>40% increase in team productivity**

### Optimize, Cut Waste, Boost Value

Fragmented systems slow you down and drain resources.

Optimize how data flows through your organization—cutting overhead and turning infrastructure into a performance asset.

**15x faster time-to-market**

### Accelerate Data Utilization

Data moves fast—most teams struggle to keep up.

Expand the use of operational data, powering decisions, AI initiatives, and outcomes in real time.

**10x increase in data utilization**

# Our platform-agnostic hub for operational data

Conduktor sits at the intersection of infrastructure and data, unifying fragmented data across clusters, enforcing governance in-stream, and simplifying secure access for data and engineering teams.

## Build Your Data Hub, Your Way

Conduktor's modules adapt to your data, systems, and maturity—on your terms.

## Start free with Conduktor Community

Since switching to Conduktor, our team has saved 30–40% of time on Kafka-related tasks. The ability to visually track messages and topic activity makes troubleshooting so much faster. It simplifies everything, reduces manual errors, and makes Kafka management much more efficient.

Thach Nguyen, Head of Cloud Architecture at LG CNS
